I am an experienced and talented writer, and I can provide you with a wide variety of articles. I am al More The Roles of Bcr/Abl Effectors in Chronic Myeloid Leukemia. Chronic myeloid leukemia (CML) is a hematologic malignancy characterized by the reciprocal translocation of the Abelson (ABL) gene on chromosome 9 and the breakpoint cluster region (BCR) gene on chromosome 22. This translocation results in the production of the Bcr/Abl fusion protein, which has been associated with pathologic proliferation and apoptotic defects in CML. The Bcr/Abl fusion protein mediates these cellular effects through interactions with a wide range of protein partners. Many of these interactions are mediated by the Bcr/Abl tyrosine kinase activity, whereas others are mediated by the association of Bcr/Abl with cytosolic proteins. Here, we review the current knowledge 82157476af
